METHOD AND SYSTEM FOR PROCESSING NETWORK DISCOVERY DATA

ABSTRACT OF THE DISCLOSURE

5

One aspect of the invention is a method for processing network discovery data. An example of the method includes defining a plurality of network data aggregations. This example also includes assigning a current state value to at least one of the data aggregations. This example further includes, for at least one current state value,

10   determining if the current state value is different than a corresponding prior state value. This example also includes merging data corresponding with at least one data aggregation determined to have a current state value that is different than a corresponding prior state value, with prior data corresponding with at least one data aggregation determined to have a current state value that is not different than a corresponding prior state value.
